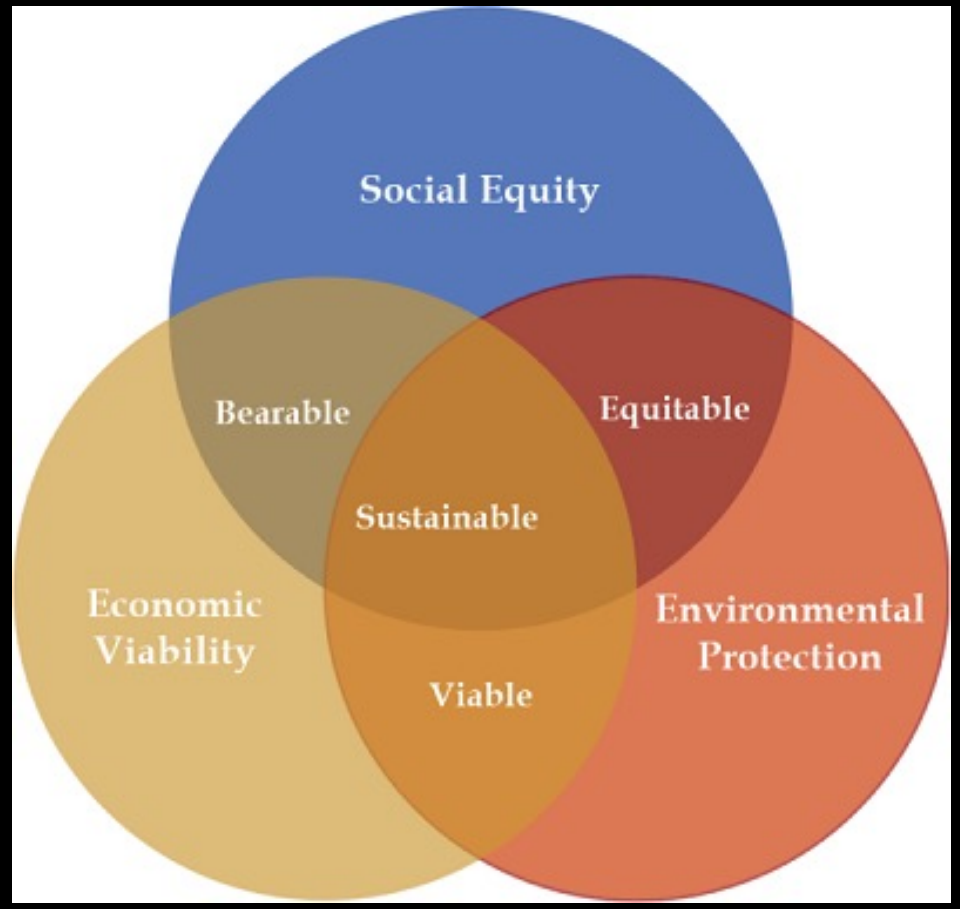
AURRIGO

ESG FRAMEWORK AND POLICIES 2024

‘The Aurrigo team is committed to building a sustainable business’



‘Our Business sustainability framework will help to ensure that we continue to grow sustainably with careful management of our impacts. However, we can make the greatest difference by maximising the benefits our business brings to our customers’

Graham Keene – Corporate Development Director

‘By focussing on key areas of the United Nations sustainable Development goals we can make the most effective changes to have the greatest impact’

David Keene CEO

AURRIGO

Our most significant contribution lies in assisting our customers with the transition to electric and autonomous vehicles, which will notably benefit the environment given the vast number of airports.

Aurrigo's latest sustainability framework builds upon our collective experiences and will continue to steer our organisation's growth in a sustainable direction. Our pivotal focus on designing and manufacturing clean energy vehicles supports our customers in attaining their organisational goals. Furthermore, we are devoted to reducing the environmental impact during the production of vehicles and automotive components, while also optimising logistics to support global business operations.

How we make a real difference and help our Customers with sustainability:

Simulation Software: AUTO-SIM

Our advanced 3D Graphic 'Auto-Sim' software digitally models the airport to produce efficient and sustainable solutions to airport operations. Scenarios and benefits can be run and modelled before embarking on any capital or infrastructure expenditure

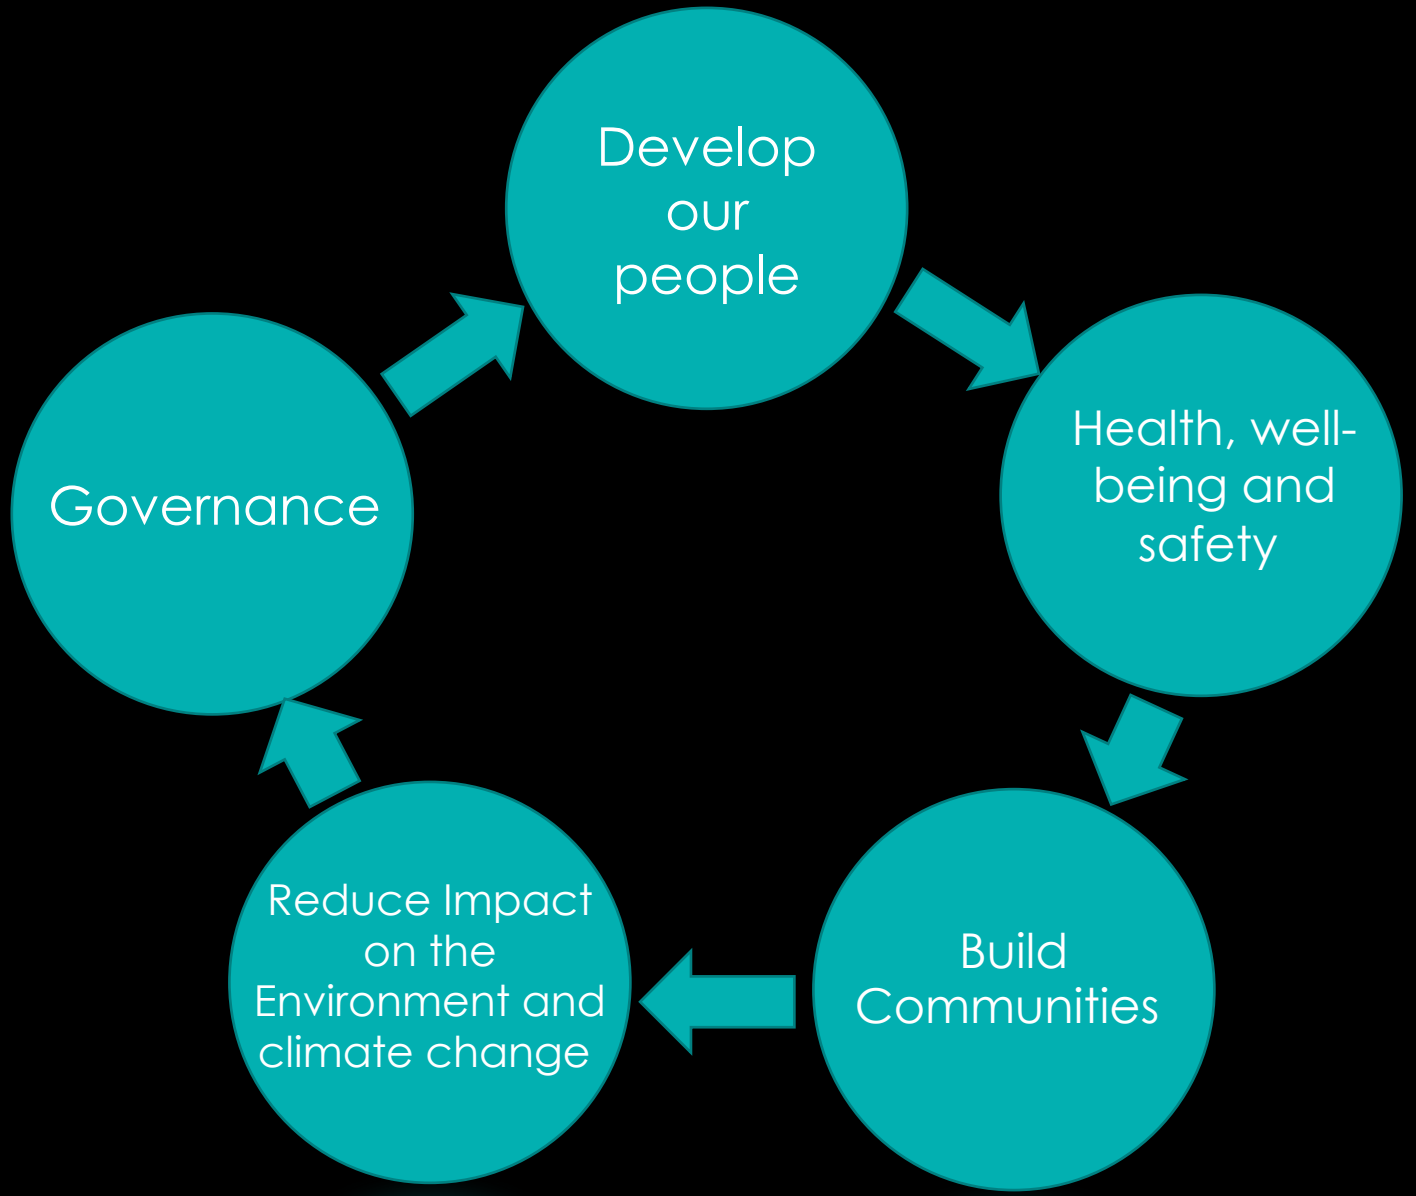
Advanced Vehicles: Auto-Dolly Tug Mark 3 (ADT3)

Our advanced electric, autonomous vehicles such as ADT3 provide clean, safe and efficient solutions.
This drives Airports towards real change on both emissions efficiency and is where our maximum impact can be achieved.

Scheduling and fleet Software: AUTO-CONNECT

Our software Auto-connect controls the most efficient scheduling of vehicles, reducing emissions and providing efficient solutions.

Aurrigo Business Sustainability core initiatives



Develop our People

Training and Education

Maintain and increase two-way communication

Maintain & Develop our Employee Value Proposition

Promote Diversity and inclusion across the organisation and monitor metrics

Continue to make every employee a share holder in the company
